

COMEBACK STORY OF THE MONTH

August 7, 2020

To Whom It May Concern;

Well, where do I start? I feel like over the past few years I have just had a real bad run of luck where one thing after another kept going wrong putting us further and further behind month after month.

Wrist injuries started off tough times where I had surgery on my left wrist while my husband had surgery on his right wrist. Not exactly easy to run a restaurant with one hand, so this made times especially difficult.

The next issue was when the IRS came knocking with a large bill that set us behind for months on end with a difficult to make payment plan. You need to pay Uncle Sam or they will lock your doors with no notice.

After a particularly slow winter, we lost some employees. Being so short staffed, we had to close earlier than we wanted we cut into revenue.

To add insult to injury, we had all sorts of equipment breakdowns that needed total replacements. Our grill, fryer, hot water heater, kitchen flooring, a refrigerator and a freezer all had to be replaced all in 1 ½ years' time! YIKES!!!

These were all tremendous issues we had to overcome but thankfully Corporate Turnaround helped us out of this sticky situation. They worked with our creditor to get our debt resolved and have been a life saver. We are finally out of debt and are very appreciative. Adam [REDACTED] has been so great to work with. He has answered our questions and help resolve any issues that came up!

We recommend using them if you need help!

Your company's results may vary. There are no time limits for reaching settlements. Some creditors may settle after CT's first set of offers and others may be resolved later on, with settlements ranging from pennies on a dollar to payment in full. Until a debt is resolved, creditors may continue with their collection efforts, including phone calls and legal action. CT does not provide any legal services. Each restructuring has a unique combination of factors, including the length of participation in the program. All of these variables affect individual outcomes. There are no "typical" results.
